

1. **What makes up the abdominal cavity?:** Everything included between the diaphragm to the pelvis
2. **What lines the abdominal cavity?:** the parietal peritoneum
3. **What major organs of concern are in the left upper quadrant?:** Spleen, Stomach, kidney
4. **What major organs of concern are in the right upper quadrant?:** Liver, gallbladder, pancreas, kidney
5. **What major organs of concern are in the right lower quadrant?:** Appendix, ovary/fallopian tube
6. **What major organs of concern are in the left lower quadrant?:** Descending colon, left ovary/fallopian tube
7. **Visceral pain:** Less severe, more generalized dull/aching
8. **Parietal pain:** more severe, sharp, constant localized pain arising from the peritoneum.
9. **What is referred pain?:** Visceral pain that is felt somewhere other than the affected system
10. **What are signs of peritonitis?:** Positive markle test/heel jar, fever/chills, loss of appetite
11. **Appendicitis rupture is more common among ages:** 4 and under
12. **What are signs of appendicitis:** Pain radiating from the umbilicus to the RLQ, positive markle sign
13. **What are signs of pancreatitis:** Sharp and severe epigastric pain, Pain in love handles/naul (Grey Turner and Cullens)
14. **What are signs of cholecystitis?:** RUQ pain/tenderness, belching, heartburn, intolerance to food.
15. **What do the four F's refer to?:** Cholecystitis
16. **Where is Gastroenteritis commonly found?:** In close communities, like nursing homes, day cares, schools, and fire stations
17. **What are signs of gastroenteritis?:** Dehydration from N/V and diarrhea, ABD pain, and fever
18. **What are some causes of GI bleeding?:** Ulcers, esophageal varices, diverticulosis.
19. **What are signs of upper GI bleeding?:** Hematemesis or Melana. Bright red bleeding
20. **What are signs of lower GI Bleeding?:** Hematochezia. Bright red bleeding
21. **What is our blood resource most commonly used for?:** GI Bleeds
22. **What are high risk factors for esophageal varices?:** Alcohol Abuse and Liver Disease
23. **What are some signs of Esophageal Varices?:** Large amounts of bright red hematemesis, shock signs, rapid pulse
24. **What are some signs of ulcers?:** Sudden onset of pain with a burning/gnawing sensation

Abdominal/Reproductive

25. **What are hernias associated with?:** Increased pressure in the abdominal cavity
26. **What are signs of AAA:** Gradual onset of lumbar, groin, and abdominal pain, and then a severe sudden onset of pain in the lower back, flank, or pelvic. Often described as tearing
27. **What are findings unique to AAA?:** Absent or decreased pulses below the pelvis, pale cool clammy cyanotic skin in the legs. Pulsating mass
28. **Abdominal pain lasting more than ____ hours is an emergency:** 6
29. **What are findings unique to sickle cell?:** Ulcers on legs, pale skin, blood feels like its "stabbing" the patient, priapism, sudden blindness in one eye
30. **Abdominal pain in women of childbearing age should be treated as _____ until proven otherwise:** ectopic pregnancy
31. **What are signs of ovarian cysts?:** Tenderness and severe pain, pain during intercourse or bowel movements.
32. **What is the most common cause of endometritis?:** retained products of conception after miscarriage or abortion
33. **What are signs of endometritis?:** Pain/tenderness, fever, abdominal distention, bleeding/discharge, discomfort during bowel movements
34. **What are findings unique to PID:** Abnormal discharge color/odor, pain during intercourse, irregular bleeding/cramping
35. **What are signs of Endometriosis?:** Dysmenorrhea, bleeding, pain during intercourse/bowel movements
36. **What patient populations are at risk for UTI's?:** Elderly women, diabetics, immobilized patients, patients with catheters.
37. **What are S/S of a uti?:** Blood in urine, cloudy urine with strong odor, pain/burning during intercourse, frequent need to urinate, fever
38. **Who is at risk for kidney stones?:** Men ages 20-50, and patients with a history of dehydration and family history of kidney stones
39. **What are S/S of kidney stones?:** Severe pain, groin/flank pain, pain with urination, urge to urinate, fever/chills
40. **Acute renal failure occurs over a period of:** days, may be reversible
41. **Chronic kidney failure occurs over:** years, requires dialysis or transplant
42. **What are leading causes of kidney failure?:** Diabetes/Hypertension
43. **What are the 2 types of dialysis?:** Hemodialysis, Peritoneal Dialysis

44. **What are important questions to ask for a patient on dialysis?:** Ask for the patients dry weight, dialysis schedule, and how much fluid was taken off
45. **What is the most common type of catheter?:** Foley catheter
46. **What are some general guidelines for managing a patient with a catheter?-**
: Draining the bag before transport, keeping the bag lower than the patient to allow for drainage. Note and document any unusual findings
