

Utilization of Video Laryngoscopy Recordings

Purpose:

To establish a clear standard for the review, retention, and deletion of video laryngoscopy files obtained during patient care to support quality improvement, quality assurance, and training initiatives within the EMS system.

Scope:

This standard applies to all video files collected by system providers or system assets and is only superseded by applicable state and federal law.

Application:

Agency Responsibility

- It is the responsibility of each agency with video laryngoscopy recording capability to provide a secure drive for uploading files.
- This drive must be accessible only to designated agency QA/QI personnel (SCQIC subcommittee members), the Chief Medical Officer, and the Chief Medical Officer's designee(s).

Upload Process

- All video laryngoscopy procedures must have the corresponding video file uploaded to the agency's secure drive before the end of the provider's shift.
- Files must be clearly marked to ensure the correct file can be linked to each incident.

Utilization

- Video files are the property of the System Continuous Quality Improvement Committee and will only be used for the purposes outlined in this standard. Unauthorized use is strictly prohibited and is considered an integrity violation in accordance with the Credentialing Standard on Modification or Revocation of Credential to Practice.
- Permitted uses:
 - **Case Reviews:** Confidential case reviews involving only the QA/QI team and providers directly involved in the respective patient care case. Full, unedited videos will not be shared with uninvolved individuals.
 - **Quality Improvement Activities:** Videos may be analyzed to identify trends, enhance system training, support research initiatives, and guide system performance improvement strategies. These videos should be edited and de-identified.
 - **Training:** Videos may be retained for training purposes but must be edited to redact all protected health information (PHI) and crew identities via an approved process, requiring verification of the redaction by a designee of the Chief Medical Officer.

Retention

- Videos will be retained for 90 days to facilitate review and potential use for training.
- Videos selected for training will be edited to remove PHI and personnel identifiers before being stored securely.
- At 90 days, any videos not designated for training use or actively being used in a quality improvement review will be securely deleted.
- Any video used in a quality improvement review retained past 90 days and not designated for training use will be deleted within 5 days of case closure.
